Dear Mr. Washburn,

I am writing concerning the proposal to deal with contamination at the West Lake Landfill in Bridgeton, MO. Low doses of minute radiation exposure over long periods of time is an unacceptable danger to the people living in this region. The government is responsible for the existence of these hazardous waste materials; and is also obligated to *completely* remove the radioactive waste that was allowed to be buried at West Lake. Revise the proposed remedy to do what is right, please. Prior to beginning excavation, provide the residents within a mile of this landfill with the possibility of a voluntary buy-out at the value that their property was worth before there was a fire in the adjacent landfill.

Thank you.
